

Troels Tvedegaard Rasmussen  
Danish e-Infrastructure Cooperation

## **EOSC Nordic project to support:**

- Alignment of EOSC policy
- Uptake of FAIR practice
- Service onboarding towards EOSC portal
- Establishing a Knowledge hub
- Solutions for crossborder sharing of data

Supported by NeIC/Nordforsk, under Nordic Council of Ministers.

# Mapping of open science policies in Nordics and Baltics

- All countries in a transition towards Open Science – at different stages
- Stakeholder involvement varies
- Access policies to data and RI needs to be coupled to e-infra resource provisioning

## Legal aspects

- Cross-border sharing of sensitive data – a policy issue more than a legal issue

# Landscape survey results on Policies

- 106 respondents = 50% response rate – But differs a lot on individual questions
- 80% familiar with FAIR, 50% familiar with EOSC,
- 14 out of 15 funding bodies has rules on open access for their grants, 8 impose rules on open research data
- Half of HEIs, RIs and e-infrastructures have open access policies and/or open research data policy (varies according to grants)
- Only few organisations have informal guidelines towards FAIR, only a very small fraction have formal rules and framework.

In general – not strong coupling between Open Science policy and tangible guidelines for scientific practise

Thank you!
