THE PURPOSE OF EOSC-PILLAR IS TO COORDINATE NATIONAL OPEN SCIENCE EFFORTS ACROSS AUSTRIA, BELGIUM, FRANCE, GERMANY AND ITALY, ENSURING THEIR CONTRIBUTION TO AND READINESS FOR THE IMPLEMENTATION OF THE EUROPEAN OPEN SCIENCE CLOUD (EOSC).

**THE PROJECT**

- Build an active community of EOSC supporters in every country.
- Propose viable business models optimised to ensure sustainable service provision.
- Enable non-commercial transnational services to be accessible through the EOSC portal.
- Adopt EOSC standards.
- Harmonise national initiatives.

This project has received funding from the European Union’s Horizon 2020 research and innovation programme under grant agreement No. 857650.
1st Comprehensive EOSC Survey of National Initiatives

Conduct individual surveys to identify services and gaps in research and e-infrastructures, universities, and funding bodies.

We are making our survey methodology available to all other regional projects.

Recommendations on Policy, Legal Framework & Business Models for National Initiatives

Ensure sustainability of services in the EOSC portfolio after the end of this project through a sharing of costs and responsibilities among national initiatives.

We will also provide the framework for the consolidation of national initiatives.

Services and Use Cases

Bring selected national and transnational scientific use cases to the standard required for integration into the EOSC portfolio.

We will also organise an open call for services in 2021.

Join the EOSC-PILLAR Network to Get Our Upcoming Updates On:

- Results of the National Initiatives Survey
- Our prototype of a “National Services Registry”
- Our Business Model and Sustainability Study
- Launch of our Open Call for services
- Publication of our FAIR training courses and toolkit
- Hackathons and webinars
- ...and much more!
